

ENVIRONMENTAL SUSTAINABILITY POLICY

As a leader in the manufacture of special steels, seamless rolled rings, open die forging, and rolled bars, FRISA acknowledges the significant impact of its operations. Committed to making a positive contribution to environmental protection, FRISA dedicates itself to pollution prevention across all operations and sets a standard in adopting practices that minimize environmental impact. To fulfill these commitments, the following priorities have been established:

1. Ensure adherence to legal and other relevant requirements across the organization and throughout our value chain.
2. Enhance management across all operations and production processes to deliver products that meet or exceed customer expectations, emphasizing resource efficiency.
3. Continually enhance our sustainable performance by addressing both risks and opportunities associated with our operations.
4. Adopt practices for efficient water use, utilizing the best and most effective technologies available for maximizing water resource utilization.
5. Manage waste effectively by adhering to the principles of minimization, reuse, recycling, and recovery, significantly reducing waste accumulation and fostering responsible practices among our team and partners.
6. Reduce dependence on fossil fuels by procuring energy-efficient products and services and integrating clean technologies to minimize greenhouse gas emissions within our value chain.
7. Promote biodiversity conservation initiatives that surround and are impacted by our operations, aiming to enhance their reach through the implementation of conservation measures across the value chain.
8. Establish a collaborative network with suppliers and third parties within our value chain to share and reinforce our commitment to environmental protection and to encourage them to adopt eco-friendly and responsible practices.
9. Optimize the use of resources with a strategic focus on conservation, maximizing their life cycle benefits.
10. Promote environmental sustainability awareness and implement best practices for environmental sustainability among our employees, customers, and all stakeholders, the importance and fostering collaboration to protect the environment.
